Tip: You may also click on the rubric icon in the same row as the student's name to open the grading rubric for that student. However, opening the rubric from here will bypass the instructor's view of the student submission, so it is best used to review or verify a previously scored rubric.

Select the Grading Rubric icon.

The Florida Panther

The Florida panther is an endangered population of cougar (*Puma concolor*) that lives in forests and swamps of southern Florida in the United States. Its current taxonomic status (*Puma concolor coryi* or *Puma concolor cougar*) is unresolved, but recent genetic research alone does not alter the legal conservation status. Florida panthers are usually found in pinelands, hardwood hammocks, and mix swamp forests.

Males can weigh up to 160 pounds (73 kg) and live within a range that includes the Big Cypress National Preserve, Everglades National Park, the Florida Panther National Wildlife Refuge, Picayune Strand State Forest, rural communities of Collier County, Florida including Golden Gate Estates, Hendry County, Florida, Lee County, Florida, Miami-Dade County, Florida and Monroe County, Florida. This population, the only unequivocal cougar representative in the eastern United States, currently occupies 5% of its historic range[citation needed]. In the 1970s, there were an estimated 20 Florida panthers in the wild, although their numbers have increased to an estimated 230 by 2017.

In 1982, the Florida panther was chosen as the Florida state animal.
