What is the Peer Review tool?

Peer Review, powered by Peerceptiv, offers a research-validated peer review technology that improves writing and critical thinking skills.

Create a peer review assignment by adding the *Lessons* tool to your site and a link to *Peer Review* on a lesson page. Students will upload their work, such as a research paper, lab report, podcast, infographic, or a presentation. Their peers will anonymously provide qualitative feedback on their work based on instructor rubrics. All students will hold one another accountable by rating the feedback they receive on their own work. Finally, grades will be generated based on the peer reviews and any instructor input.

Note: For instructions to add this or any other tool to your site, see <u>How do I add a tool to my site?</u>

Peer Review Features

Instructors can:

- Create assignments for students to submit files.
- Create a rubric for each assignment.
- Provide optional feedback on students' work.

Students can:

- Upload their work for an assignment.
- Provide anonymous feedback on their peers' work.
- Rate the feedback they receive to hold each other accountable.

To learn more about how Peerceptiv enables peer and self assessment, collaborative learning, and more, read the <u>How it Works (opens new window)</u> page on Peerceptiv's website.

> 💡 **Tip:** *Peer Review* is best used within a lesson page. For more information, see <u>How do I add an external tool to a lesson page?</u>

To access this tool, select Peer Review from the Tool Menu

in your site.
